## Cosinus et sinus hyperbolique

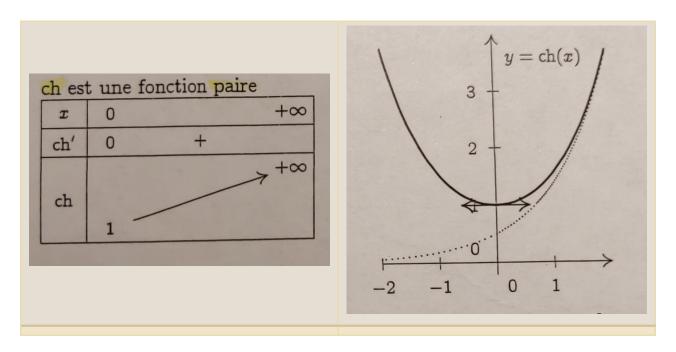

#trigonometrie #analyse

$$orall x \in \mathbb{R}, \; ch^2(x) - sh^2(x) = 1$$

## Cosinus hyperbolique

$$ch: \mathbb{R} \longrightarrow \mathbb{R}; \quad ch(x) = rac{e^x + e^{-x}}{2}$$

- ch'(x) = sh(x)
- $ullet \ orall x \in \mathbb{R}, \ ch(-x) = ch(x)$

## Sinus hyperbolique

$$sh: \mathbb{R} \longrightarrow \mathbb{R}; \quad sh(x) = rac{e^x - e^{-x}}{2}$$

- sh'(x) = ch(x)
- $ullet \ orall x \in \mathbb{R}, \ sh(-x) = sh(x)$
